DEVICE TEST

1, Explain behaviour of hub device

1. It is a device, its use to connect multiple device together.
2. It is a Broadcast device
3. HUB → ~~some~~ PC-A data send to all ports, when PC-A sends data to PC-B
4. HUB - operate layer-1 (physical layer)
5. Traffic | getting slow (network)

2, Explain behaviour of switch device

1. It is a device its use to connect multiple device together
2. It is a Broadcast device) unicast - (one to one)
3. It is a layer-2 device
4. It contain mac table
5. Reduce the traffic
6. when source ip send data to destination - ip then switch writing in table port no and mac. it is calling Address Learning, once confirmed Data pass to destination ip, mac table time limit 5 mins.

3, Explain behaviour of router device used

1. It is a to break's the broadcast Domain
2. It is a layer-3 device
3. It contain Routing table
4. Routing table contains list of Route
5. It is a unicast device.
6. Router it is used to connect a different network
7. Router forwarding all data through Based on IP address
8. Router having ip address (for each interface)
